## Micro MaTch Connector Micro MaTch 连接器

TE Connectivity Micro-MaTch connector family, with its contact spacing of 1.27mm, offers a variety of wire-to-board and board-to-board interconnections. The Micro-MaTch contact helps prevent fretting corrosion, the traditional failure mode in tin-plated connections. Relative movements caused by vibrations/thermal expansion between male and female contacts are absorbed by an additional positioning spring in the female part. By preventing movements on the contact spot, a gas tight connection can make the Micro-MaTch contact spring system fretting corrosion resistant.

## RITS Connector RITS 连接器

The e-CON standard was developed in Japan in 2001 by a group of Japanese manufacturers in order to standardize connections from sensors to terminals. This standard is not under control of any standard organizations. Without the standard, each manufacturer had specified different connectors for terminations of sensors to Programmable Logic Controllers (PLCs), and end users had to prepare many different connectors and different tools. In order to improve this situation and create a user-friendly environment, TE Connectivity has offered AMP RITS connectors as the standard interface connector for sensors. The 4-position RITS connector is approved as the industry standard connector.

## Force Guided Relays 强制导向继电器

Force guided relays are key electromechanical switching components used within safety relay circuits. They enable the recognition of a contact's switching condition in a simple and safe manner. With the normally open and normally closed contacts of a force guided relay being insulated from each other, the load and monitoring circuit may have different voltage potentials. This simplifies monitoring, as the same relay can switch line voltage with one set of contacts and switch a DC signal to the microprocessor with another.

TE Relay Products currently offers the following two, four and six pole models: SR2M, SR4M and SR6. Small in size they are offered with PCB terminals; special types and modules are available.

Force guided relays are designed to switch outputs of safe PLC's (Programmable Logic Controllers) for automation and control, to monitor railway signals, to provide information related to the opening of an elevator door and to be used in monitoring of machines and processes. That's why force guided relays are absolutely essential for safety control applications - they help protecting people's life when danger needs to be switched off - safely.

强制导向继电器（俗称安全继电器）是安全继电器电路中使用的关键机电开关元件。它们能够以简单而安全的方式识别触点的开关状态。强制导向继电器的常开和常闭触点彼此绝缘，负载和监视电路可能具有不同的电压电势。这样可以简化监测，为同一继电器开关电压和一组触点和一个直流信号切换至另一个微处理器。

TE 继电器产品目前提供以下两，四和六极的型号：SR2M，SR4M 和 SR6。体积小，有 PCB 焊脚，可提供特殊类型和模块。

强制导向继电器的设计用于将安全 PLC（可编程逻辑控制器）的输出转换为自动化和控制，监控铁路信号，提供与电梯门打开有关的信息，并用于监控机器和过程。这就是为什么强制导向继电器对于安全控制应用是绝对必要的——它们有助于保护人们在危险需要关闭时的安全。
